

## DIGI-LINK CONFIGURATION

---

**OUTPUT FILE EXTENSION:** Enter a file extension for the outgoing file. Default is DIG.

**SHOULD PL IGNORE THE FACT THAT THE PLAYLOG HAS MORE THAN ONE DAY:** This feature is used when the log being reconciled does not run in the standard Midnight to Midnight format but rather over the midnight hour EG 2:00 am to 2:00 am.

**SHOULD PL ATTEMPT TO USE ORIGINAL SCHEDULE TIMES IN RECONCILE?** When reconciling should Power-Link take into account the original scheduled time as returned by the Digi-Link? This is used to better track down events that were dragged and dropped in the schedule rather than just played out of time tolerance.

**SHOULD PL CHANGE THE TIMES OF MANUAL TRIGGERS (SO005) TO ZERO:** If an event such as a 'Live' cart is turned into a SO005 event musty power-link give it a duration of '0' or leave it scheduled duration.

**SHOULD PL RECON FROM PARTIALLY PLAYED ITEMS:** If an event is returned in asplay as not having being fully run or cut short must Power-Link still reconcile it?

**PLACE ERROR STATUS IN RETURN TITLE:** If an error status is returned from Digi-Link must Power-Link include it in the recon report as the events return title?

**Realign Time for PrePosted SO005 's ?** This is used when SO005 stop commands are placed in front of some or all of the spot sets. We ran into a small problem that their (by 1 second) incremented times would step the event's time out from the limits of the Clock in Digi-Link. By realigning the times, the SO005 events' times were wound back one second to conform totally with the spot cluster's begin time.
